Mochamad Rafli Dwisanjani

082120369752 | raflidwisanjani@gmail.com | www.linkedin.com/in/raflidwisanjani
Bandung, West Java

Data science practitioner with an Industrial Engineering degree and hands-on experience in Python, SQL, and machine learning. Builds and evaluates predictive models, works with real-world datasets, and translates analytical findings into business decisions.

EDUCATION

Telkom University **Bandung, Indonesia**
Bachelor Degree in Industrial Engineering | GPA: 3.65/4.00 **Aug 19 – Nov 23**

- Designed a business model canvas for a home industry potato chip product.
  New strategy focused on uplifting sales and enabled the product to surpass it's sales target.

WORK EXPERIENCE

PT TKG Taekwang Indonesia **Subang, Indonesia**
Lean Manufacturing Staff **Oct 23 – Mar 24**

- Serves as a pro-active and result-driven team member for the newly established team dedicated to implement Total Productive Maintenance (TPM)
- Conducting 5S, workplace cleanliness, and workplace safety audits
- Responsible in implementation of 5S and continuous improvement in support of production department.
- Contributions involves managing team data sharing system for all work program.
- Succesfully increase time efficiency on team's weekly task by 80% after created and implemented a data entry system for operator using QR code and Google Appsheet

PT Bank BRI **Bandung, Indonesia**
Digital Marketing Intern **July 22 – Sep 22**

- Responsible for planning, executing, and monitoring digital marketing campaigns across various online platforms for a tranformative project called "Localind Market" that aimed at empowering small micro-business owners to digitize their products.
- Succesfully cultivate awareness and engagement for projects among diverse digital audiences by utilizing a combination of search engine optimization (SEO) and engaging social media strategies, and content marketing. Resulting in 20% - 35% conversion rate per month.

PROJECTS

Used Cars Price Predictions
Tools : Python, Pandas, Scikit-Learn, SHAP

- Built an XGBoost regression model to estimate car prices, selected as the best performing model among several algorithms compared. Achieved strong predictive accuracy across all evaluation metrics such as RMSE, MAE, and MAPE, meeting project targets.
- Ran Cost-Based Analysis on cancelled acquisitions, demonstrating significant cost and time savings.
- Used SHAP to identify key price drivers and translated findings into business recommendations.

Bike Demand Predictions
Tools : Python, Pandas, Scikit-Learn

- Built an XGBoost regression model to predict hourly bike-sharing demand, selected as the best-performing model among several algorithms benchmarked. Achieved strong predictive accuracy across all evaluation metrics (RMSE, MAE, MAPE) after hyperparameter tuning.
- Performed end-to-end modeling pipeline, EDA, feature engineering, preprocessing, and hyperparameter tuning, following the CRISP-DM framework.
- Engineered new features from domain knowledge that surfaced consumer demand patterns not visible in raw data.
- Conducted Cost-Benefit Analysis, demonstrating a positive ROI and significant operational savings from optimized fleet planning and staffing.

CERTIFICATION

Purwadhika Digital Technology School
Data Science & Machine Learning (2026)

SSCX International
Lean Six Sigma Yellow Belt (2025)

SKILLS

- Hard Skills : Machine Learning, Data Analysis, Data Visualization
- Soft Skills : Analytical Thinking, Problem Solving
- Softwares : Python, SQL, PowerBI
